

TECHNOLOGY UPDATE

New information system is a *treasure map*

COHSASA – in partnership with Xylaco Software – has developed a unique application, which will provide a 360-degree view of strengths, weaknesses and urgent improvements needed in health facilities enrolled in COHSASA's quality improvement and accreditation programmes.

Examining 37 areas of operation and measuring both clinical and non-clinical performance indicators, the new database, migrated from COHSASA's multiple legacy databases, will be able to provide clients with quick and easy access to a treasure trove of information about their hospitals.

Want to know how your hospital shapes up with regard to infection control? Get your access code, connect on-line and the COHSASA information system will tell you exactly how you stand against professional standards, how various departments associated with infection control are managing, what criteria they are meeting and urgent deficiencies that must be promptly addressed.

Moreover, if you are in the COHSASA Facilitated Accreditation Programme, you can monitor staff progress and pinpoint the bottlenecks and delays.

Information provided ranges from an overall view of the hospital's performance to how well the hospital is complying with measurable criteria.

The data can be used as a management tool to guide processes and to inform strategic decisions and planning.

COHSASA CEO, Dr Stuart Whittaker, says that this new platform provides query tools that enable greater levels of flexibility around client data and improve the integrity of the overall information system.

According to Whittaker, the new information system will increase productivity. Workflow and business processes will become fully automated, thus reducing the amount of administrative work that managers and staff have to perform.

Despite challenges such as financial constraints, poor physical infrastructure, shortages of medication and consumables, this new information system will empower healthcare facility managers to proactively manage their hospitals and monitor performance on-line.

"This will also reduce the risks of in-house business process knowledge becoming lost when key staff members leave and reduce the amount of training required for new staff," he says. •

REWARDING QUALITY: Chairman of COHSASA, Albert Ramukumba, hands over the accreditation award to the Nursing Services Director of St Francis Hospice, Lesley Lawson, who has been with the hospice since its inception 20 years ago.

"Empowering healthcare facility managers by providing relevant, meaningful information at their fingertips"

Ten South African hospices accredited

Ten hospices in the country, all members of the Hospice Palliative Care Association of South Africa, have been accredited for two years, having met the professional quality standards of COHSASA.

A total of 47 members of the Association entered the accreditation programme. Grahamstown Hospice was the first to be accredited, followed by nine others, which have met stringent requirements for the provision of palliative care.

They were rated on standards that include governance and leadership; human resource management; administrative support services; risk and quality management and improvement; patient rights; access to care and admissions; holistic patient care; medication management and support services.

The HPCA and COHSASA jointly developed these comprehensive palliative care standards, which will benefit patients and families facing life-threatening illness. The set of standards was first piloted at various member hospices around the country and has since been finalised.

HPCA member hospices provide a range of services that include community-based home care, augmented by palliative day-care centres and inpatient units for terminally ill patients, bereavement counselling and education and training.

HPCA hospices have been providing palliative care to South African communities since 1979. There are currently 74 member hospices across the country reaching some 30 000 people each month. Another 10 000 orphans and vulnerable children are also reached by hospice programmes. Care is provided mainly in the patient's home,

THE TEN HOSPICES THAT HAVE BEEN ACCREDITED ARE:

- **Drakenstein Hospice** in Paarl, Western Cape
- **Grahamstown Hospice** in Grahamstown, Eastern Cape
- **Helderberg Hospice** in Somerset West, Western Cape
- **Highway Hospice** in Westville, KZN
- **Knysna/Sedgefield Hospice** in Knysna, Western Cape
- **South Coast Hospice** in Port Shepstone, KZN
- **St Francis Hospice** in Port Elizabeth, Eastern Cape
- **St Joseph's Care and Support Trust** in Bronkhorstspruit, Mpumalanga
- **Sungardens Hospice** in Pretoria, Gauteng
- **The Hospice Association of the Witwatersrand** in Johannesburg, Gauteng

Nomhle Ludaka

A decade of dedicated service

There are two members of COHSASA staff that our clients know well: Receptionist Nomhle Ludaka and Chief Surveyor Dr Giel van Schalkwyk, who were both awarded certificates for 10 years of loyal service to COHSASA. The certificates were presented at a tea for staff members, all of whom paid tribute to Nomhle's professionalism, her cheerful voice and her searchlight smile. Dr van Schalkwyk was praised for earning the respect of his peers and for being a highly valued and respected member of the COHSASA family. •

Dr Giel van Schalkwyk

TOP MANAGEMENT – Get out of your office!

When I run the Health Executive Development programme for senior facility managers, I make no apology for spending a lot of time working on quality improvement techniques and leadership. As much as leadership has to come from the very top, the most senior team in a facility needs to understand what is involved in continuous quality improvement and be able to provide support and the necessary resources for it to happen. Good management and leadership encourages clinical staff to provide good care and ensures that cleaners, laundry workers and maintenance staff understand the important role they play. Good management works together as a team to achieve the best possible results for their facility and improve services for patients – so get out of your office and make a difference!

- Jacqui Stewart, Chief Operations Manager, COHSASA

Getting to grips with COHSASA

COHSASA has always hosted training workshops of one kind or another at their headquarters, and, earlier this year, at the request of the Department of Health of the Eastern Cape, the Council provided a successful orientation session for seven senior officials on various aspects of the programme. The sessions looked in detail at the structure of COHSASA's standards, the database and information system and, most importantly, how to maximise the use of data provided to hospitals and provincial officials.

Opening the workshop, Dr Stuart Whittaker, CEO of COHSASA said, "This workshop has been designed to help you understand the COHSASA programme, its standards, the information system and the reports we send to you so that you can use them to help your hospitals. We want you to become as proficient at using the data as COHSASA staff."

There were also general training sessions drawing on examples set in real situations. The workshop provided attendees with practical advice on managing, influencing and negotiating their way through various situations of conflict and crisis.

On the third day, in a practical exercise, attendees gave individual presentations that demonstrated they had a clear understanding of how to extract information from COHSASA reports and how to analyse the data so as to monitor and evaluate progress in hospitals.

A formal evaluation of the three-day workshop showed that participants found the sessions to be "very useful" and that they were clearly impressed with sessions dealing with risk management, health and safety, health technology management and clinical risk.

The general consensus was that the training session, led by Chief Operations Manager, Jacqui Stewart, had helped the senior Eastern Cape staff understand the inner workings of standards implementation and how the provincial authorities could support hospitals undergoing the COHSASA programme. It also became clear how the intent of the quality improvement strategies could be supported at the level of primary health care.

The training sessions covered a wide range of subjects and between the serious, exploratory sessions techniques such as role-playing made the sessions fun.

The participants said later, "We like working together hand in glove with COHSASA in ensuring that the quality of care in Eastern Cape is improved. We want more managers to attend." •

ORIENTATION TRAINING A SUCCESS: COHSASA Chief Facilitator, Tshawekazi Ncedana (standing) works with senior E. Cape officials at the Orientation Workshop for the Eastern Cape. From left: Xolela Somahela, Didimalang Pemba and Dr Z.B Elabor.

LEARNING TOGETHER: Participants were (from left): Xolela Somahela, Bulelwa Ngada, Dirkie van Jaarsveld, Gerard Locke, Tshawekazi Ncedane, Didimalang Pemba, Jacqui Stewart, Riel le Roux, Miyakazi Nokwe and Dr Z.B Elabor.

COHSASA CEO attends Patient Safety Collaboration in Chicago

CEO of COHSASA, Dr Stuart Whittaker, was invited to Chicago as an Inaugural Member of the International Steering Committee for the new World Health Organisation Collaborating Centre on Patient Safety. This was hosted by the Joint Commission on Accreditation of Healthcare Organisations and Joint Commission International who have been designated as a new WHO Collaborating Centre on Patient Safety. The meeting offered an important opportunity to work with healthcare and patient safety leaders around the world to optimise the deployment of precious resources in identifying, refining and adapting solutions to improve patient safety everywhere. •

Kefuoe Qwela and Noleen Davids

Safer health care environment in SA

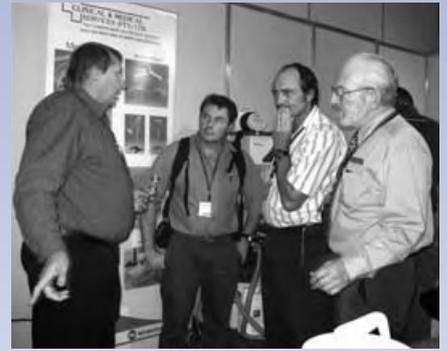

COHSASA's Clinical Engineer, Gerard Locke, gave a workshop paper on a "Safer Health Care Environment in South Africa" at the 19th Congress of the International Federation of Hospital Engineering (IFHE) Conference at the Cape Town International Conference Centre (CTICC) in May.

The workshop aimed to 'contribute to the development and strengthening of institutional capacity in Africa and beyond for proper planning and management of technology in health service delivery and to explore technical support and service options for healthcare facility physical infrastructure and equipment.'¹

The workshop was organised by WHO in collaboration with the American College of Clinical Engineering (ACCE), International Federation of Hospital Engineering (IFHE), International Federation for Medical and Biological Engineering (IFMBE), and Health Technology Management Programme at the University of Cape Town (UCT).

The conference theme was "Hospital Engineering in Developing Countries". •

TECHNOLOGY UPDATE: Ralph Sommarberg (left), Executive Director of Clinical and Medical Services (Pty) Ltd, explains some of the finer points of their company's state-of-the-art anaesthetic machine to Malcolm McSherry and Jackie Cloete of the Department of Health and Gerard Locke of COHSASA.

NEW on board

Welcome to two staff members who have joined the Data Bank. They are Kefuoe Qwela (far left) and Noleen Davids. Kefuoe has a background in switchboard, facilitation, training and telesales. Noleen began working life in a printing firm, taught herself how to use computers and was an attorney's collecting clerk and receptionist before joining COHSASA. She hopes to settle in at COHSASA and is interested in poetry and expressing herself in verse. •

New Emergency Unit protocols

A new emergency unit protocol, the Triage system, will soon be introduced at emergency facilities at state and private hospitals across South Africa. This will allow for the sorting of, and attendance to emergency patients according to the acuity of medical need, rather than in order of arrival, according to Medi-Clinic. The Triage system (derived from the French word "trier", which means to sort) is set to reduce waiting times, improve patient flow and improve the general working environment for the often over-burdened staff working at these emergency facilities. Dr Clive Balfour, head of Emergency Services at the Medi-Clinic private hospital group, says the greatest advantage of such a system is the reduction in both mortality and morbidity rates.

through community-based home care, in day-care centres, in hospitals and frail care centres, as well as through inpatient units.

Kath Defilippi and Sue Cameron, Patient Care Services Co-ordinators for the Hospice Palliative Care Association and the HPCA quality initiative representatives, say involvement in the accreditation programme provides a means to

measure care and progress objectively and also enhances sustainability.

"It is linked to an extensive mentorship programme that supports member hospices as they work towards achieving full accreditation. This is in keeping with HPCA's vision of equipping all hospices to serve as palliative care resources within the communities they serve," they said. •

Working with you

COHSASA wants to make sure that you feel supported at all times. If you are in our facilitated accreditation programme, you will have your very own facilitators. Please check the list below and see whom you can phone if you need answers to your questions or if you need guidance. You may contact your facilitator directly and he/she will be happy to help you. It would be best if you appoint one person from your hospital to conduct all communications with your facilitator. Those hospitals that have entered a conventional accreditation programme should feel free to phone the head office if they have special queries. Kindly contact COHSASA in Cape Town at 021 531 4225/6/7 and good luck!
